

ECONOMIC RUBBER CAR STOPPER (RCS-500)

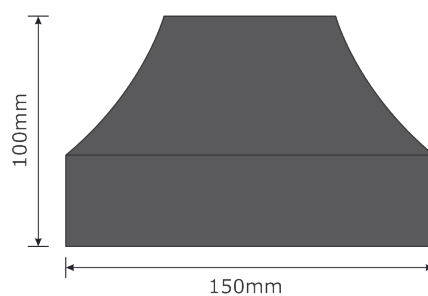

Economic Rubber Car Stop is one of the equipment that can be handled and installed to solve some of the problems in parking lots, such as car collisions when parked against a wall or other car, stopping a car in another person's parking space, and occupying two spaces simultaneously. It is a compact rubber and usually was mounted two side by side for each of the tires.

Features :

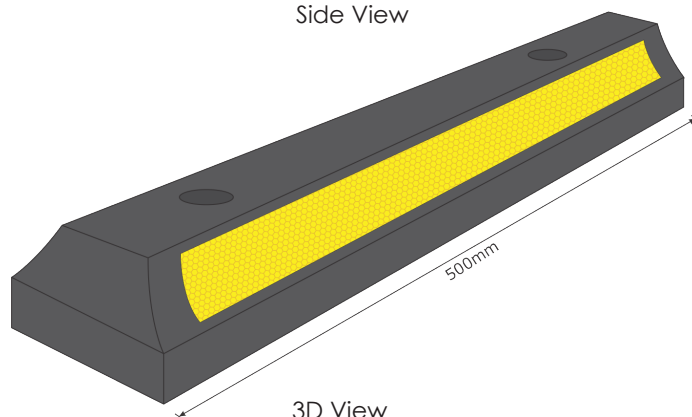

- Trapezoid shape acts as an effective arrester and load distributor.
- Anchor fastening system for ease of installation and stability.
- Compact yet rugged. Maximum visibility, even at night.
- Stands to impacts and not breaks thanks to its flexible rubber material.
- The offered range renders good energy absorption from vehicle impact and helps in protecting the anchor bolts from the impact.
- Not easy to warp, crack, chip or rot.
- Can be easily removed or relocated.
- Pre-drilled holes with steel washer for easy installation.
